

Which skin problems can be treated with microdermabrasion?

This system gradually abrades epidermal cells to treat a vast range of skin problems:

- Sun-damaged skin
- Enlarged pores
- Uneven pigmentation
- Blackheads and comedones
- Fine lines and wrinkles
- Superficial scars and stretch marks

Erase years from the appearance of your skin naturally without the use of invasive procedures...

Derma•Pod Total rejuvenation System combines the latest technologies to bring superior, longer lasting results... controlling and, in some cases, reversing the aging process.

Derma•Pod Total Rejuvenation Treatments

Combines Skin Resurfacing, Photo Biostimulation and Micro Currents in one treatment for a complete facial rejuvenation package that brings:

Before treatment

After treatments

- Younger-looking skin
- Reduction in fine lines and wrinkles
- Tightening facial contour
- Increase skin elasticity
- Improved textural irregularities (pigmentation, enlarged pores, mild scars)

...all with no downtime or adverse effects!

Technology

Total Rejuvenation System
combining integrated technologies

Derma•Pod combines the latest technologies to bring superior, longer lasting results... controlling and, in some cases, reversing the aging process.

Now Microdermabrasion, Photo Biostimulation and Micro Currents are integrated in a complete facial rejuvenation package. The synergy produced by this amazing combination of treatments provides a more effective solution to the aging process by directly impacting the epidermis, dermis and muscles.

Microdermabrasion Phase

Derma•Pod ultimate rejuvenation treatment begins with skin resurfacing. By removing the upper layers of the epidermis, the skin becomes more receptive to photo treatments and micro currents.

During this phase Derma•Pod projects a controlled stream of natural mineral crystals to gradually erase flaws and blemishes. Each pass removes a precise amount of surface cells revealing newer and healthier skin. It refines pores, coarse and granular skin, reducing uneven pigmentation while smoothing superficial scars and blemishes.

Lifting Phase

In the second part of the treatment, Derma•Pod directs a pulsating light to the skin surface. Light passes through the layers of the skin stimulating repair mechanisms and the production of collagen. Scientific experiments conducted by NASA and other respected groups show conclusively that red light increases collagen production in the skin. Increased collagen smoothes and softens the appearance of wrinkles, reducing the size of pores and improving skin texture.

At the same time the electrodes apply non-invasive Micro Currents to lift sagging muscles and tighten facial contour. These replicate the natural bio-electrical currents found in the body.

Product Infusion Phase

The last part of this ultimate rejuvenation treatment features the infusion of antioxidants and vitamin complexes to further control the aging process.

Frequently asked questions...

How does the treatment work?

Derma•Pod combines microdermabrasion with **Photo-Biostimulation** and **micro current** to fight the aging process on 3 levels

» Epidermal aging

- Exfoliates upper layers of the epidermis
- Smoothes away pigmentation and minor scars
- Refines skin texture
- Activates cell renewal

» Muscle aging

- Firms and tones sagging muscles
- Redefines facial contour

» Dermal aging

- Increases collagen production
- Reduces expression lines and smoothes wrinkles
- Restores elasticity

How does the treatment feel?

The **microdermabrasion** treatment is performed with no discomfort. Some patients with very sensitive skin might experience a sensation similar to mild sunburn. **Photo treatments** are so gentle that most clients fall asleep. Unlike laser or IPL that rely on thermal damage, treatments are non-invasive and totally natural. They use a combination of light from the visible spectrum, similar to sunlight (but without the harmful UV rays) and **micro currents**, similar to our own bio electrical current found in the body.

How many treatments will I need?

Age, lifestyle and skin condition determine the number of treatments required to achieve results. During the complementary consultation, your skin type and condition will be determined. Your esthetician will be able to evaluate your skin, explain the needed procedure and tell you the estimated number of sessions needed. Clients usually report a noticeable improvement after just one treatment.

What results can I expect?

The improvement can be quite dramatic. Most clients see immediate improvement. With a series of treatments, years are easily removed from the appearance of the skin.

- younger-looking skin
- reduction in fine lines and wrinkles
- increased skin elasticity

- redefined and firmer facial contour
- reduced pore size
- improved textural irregularities

Leading skin care experts have discovered that the best way to attain lasting results is through the synergy possible with integrated technologies. The Derma•Pod uses three advanced facial programs in one treatment session to correct, and in many cases reverse age related problems.
